

ENO VIRTUAL CARD

A Secure Solution for Online Shopping

Eno is a solution for credit card fraud in online shopping.

- It involves adding the Eno browser extension to your preferred browser and signing in using your Capital One credit card credentials.

Eno generates a virtual card number specific to the merchant, linked to your actual credit card account.

- The virtual card is protected from potential fraud and can be easily managed.

All charges appear on your credit card statement as usual.

- Eno allows quicker checkout by creating virtual cards directly from any checkout page.

Benefits include enhanced security, convenience, and control over online spending.

- Capital One customers need to have a Capital One credit card to use Eno's virtual card numbers.

Virtual card transactions are treated like regular credit card charges.

- Stores don't need your virtual card information for returns.
